

FOR IMMEDIATE RELEASE

**TWO INDUSTRIAL RENTAL BOILER SYSTEMS DELIVERED,
INSTALLED, AND COMMISSIONED IN SEVEN DAYS**

Fremont, California, February 13, 2019..... Nationwide Boiler Inc., the largest rental boiler supplier west of the Mississippi River, recently provided two large package watertube boilers on a fast-track emergency basis to a pulp and paper facility in the Pacific Northwest. Each boiler traveled nearly 1,000 miles to the customer site through rough winter weather, and in just seven days the boilers were delivered, installed, and put into service.

Nationwide Boiler's long-time customer was experiencing issues with their large power boiler, and on short notice had to take it down for repairs. After fielding the initial call, Nationwide Rental Manager, Tim McBride, identified two 70,000 lb/hr trailer-mounted watertube boilers that were serviced and ready for immediate use. Within two days, the boilers headed North to support the outage. "This type of emergency need is exactly what we are here for," explained McBride. "We've built a fleet of over 100 rental boilers in a variety of sizes and operating parameters, allowing us to have units available at any given time to support our diverse customer base." The boilers are currently operating and supporting production at the pulp and paper facility, and will continue providing steam to the plant through the duration of the repairs.

With storage facilities throughout North America, Nationwide Boiler is strategically positioned to provide equipment for planned, unplanned, and emergency outages to customers worldwide. The company also maintains an environmental division for increased efficiency and ultra-low NOx solutions, and a controls division for burner management, combustion control systems, fuel trains, and other process equipment support.
