

FOR IMMEDIATE RELEASE**FEDERAL GOVERNMENT FACILITY PURCHASES FIVE (5)
650 HP HIGH PRESSURE MOBILE BOILER ROOMS FROM
NATIONWIDE BOILER INC.**

Fremont, California, March 24, 2015...... Nationwide Boiler recently announced the sale of five (5) 650 hp mobile boiler rooms to a federal government facility. The high pressure, ultra low NOx boilers will be used to replace their existing coal fired steam plant, which required major retrofitting for Boiler MACT compliance.

Nationwide Boiler partnered with their local representative and met directly with the customer to gain a clear understanding of the site, the unique facility requirements, and the critical role that the equipment would serve in this significant project. System specifications included modular, self contained boiler rooms, industry standard control systems, dual fuel firing capabilities with ultra low NOx emissions, Boiler MACT compliance, and the need to accept and adhere to stringent government quality standards. In addition, speed of delivery, installation and start-up were also critical factors.

Drawing upon their extensive experience, Nationwide Boiler proposed five (5) 650 hp mobile boiler rooms to satisfy the project requirements. After a thorough internal quality control and inventory control review process, Nationwide Boiler met the requirements of the customer and was awarded the sale for the steam project.

The boilers will be customized by Nationwide Boiler to meet the specific needs of the application, and a control and installation strategy has been developed to allow all five boilers to operate at full capacity as a single cohesive steam plant. A comprehensive pre-delivery testing
